6

WHITE. 1637.

A New Almanacke and Prognostication, for the yeere of our Lord God, 1637.

Being the next after the *Bissextile*, or Leape-yeere.

Calculated for the Meridian of the most Honourable City of *London*, and will serve generally for the Monarchy of Great BRITAINE.

By JOHN WHITE, Wellwiller to the *Mathematickes*.

LONDON,
Imprinted by *F. K.* for the Company of STATIONERS.

The Common notes and moveable feasts for this present yeere of Grace.

1637.

According to the old accompt used here in England.		The new Gregorian accompt used beyond Sea.

Fit times for blood-letting.

The Sanguine from the new moone to the first quarter.
The Cholericke, from the first quarter to the full.
The Flegmaticke, from the full to the last quarter.
The Melancholy, from the last quarter to the change.

Dangerous times for blood-letting.

In the heate of Summer, or cold of Winter, or when the Moone is in the Signe which governeth that part of the body you would let blood; Also within two dayes of the change, or full of the Moone.

B L

The Anatomie of Mans Body, as the *parts thereof are governed by the* 12. *Celestiall Signes.*

Aries, Head and face.

Taurus, Neck and throate.

Cancer, Breast, stomack, and ribs.

Virgo, Bowels, and belly

Scorpio Secret members

Capricorn Knees.

Gemini Armes & shoulders

Leo, Heart & back.

Libra, Reines & loynes.

Sagittarii, Thighes

Aquarius, Legs.

Pisces, the Feet.

Bold fierie Aries ruleth Head and Face,
In Necke and Throate doth Taurus challenge place:
The twining Gemini's, goverue Armes and Hands,
The Brest and Stomacke Cancer she commands.
Then lusty Leo hath the Backe and Heart,
Bowels and Belly they are Virgo's part:
In Loynes and Reynes is Libra's liberties,
And Scorpio rules the Stones and Pryvities.
The Thighes and Hanch is Sagittarius long,
And both the Knees to Capricorne belong:
Aquarius makes the Legges much aches feele,
And Pisces rules the Feete from Toe to Heele.

BL

January hath xxxj. dayes.

Warme meates and clothes this month are good,
Take heed of Bathes and letting blood.

The 1. Day, Sun riseth at 8. and 1. min. sets at 3. & 59. min.
The 15. Day, Sun riseth at 7. & 43. min. sets at 4. & 17. min.

White. 1637.

A Prognostication for this yeare of our Lord God. 1637.

Being the first from the *Bissextile*, or Leape-yeare.

VVherein is conteyned the state *of the whole Yeare; the disposition of* each Quarter; and the Inclination of the Weather for euery Quarter of the Moone throughout the whole Yeare.

With the meeting of the Planets and the Moone; also Husbandry Aduertisments, *with other things fit to be known, both pleasant and profitable.*

And at the end of the Booke, is the whole *Almanacke, conteyned in one Leafe, for this* Yeare 1637. which being cut out, is fit to be placed into a Table-Booke, Booke of Accompt, or other.

By *Iohn White*, Well-willer to the *Mathematicks*.

LONDON,
Printed for the Company of Stationers. 1637.

Since his Maiesties proclaiming	12
Since Prince Charles was borne.	7

A briefe Declaration of the Disposition of the foure Quarters of this Yeare.

And first of Winter.

The Winter Quarter best doth prophenate
To all Degrees, and Sexes, their estate.

Sol in Capricorne, Aquarius, Pisces.

HYems, (or Winter the first Astronomicall Quarter) did begin the last yeare 1636. upon Munday being the 12. of December; (and it doth continue this yeare 1637. till Saturday, being the 11. of March) at which time the Sun did make his entrance into the first degree of Capricorne, and continueth while hee trauelleth through these three Winterly Signes, Capricorne, Aquarius, and Pisces.

This Quarter, of its naturall propertie is cold and moyst, (of contrary quality to the Summer) being of the Phlegmaticke Complexion, which humor doth most predominate in our bodies from three of the Clocke in the afternoone, till ix. of the clock at night. Now doe the Sea-toss'd Mariners endure many a storme on the raging Ocean; the Windes are strong and high, making the billowes of the Sea to fome and swell: The Floods are high, the Ayre is cold and piercing, the Dayes are short, the Nights long, and the strength and vigour of euery Creature decayeth. The pores of the Earth are now incloſed and shut vp by the extreame coldnesse of the Ayre: Fowles get them to the warmest Regions, Beasts seeke for a shelter, Serpents betake them to their dennes, and the Fishes get into the deepest of the waters for their warmth and comfort: For whatsoeuer the cheerefull Spring and comfortable Summer did produce and nourish, this Quarter doth destroy and vanish. The colder and drier the Winter is, it is the more wholesome for Mans health: yet too much cold killeth Plants

and Trees in a cold Climate: A moyst and warme Winter is an enemy to Nature, but a friend to Husbandry; and indifferent store of Snow doeth ranken the Earth, and preserueth Corne. Now for the preseruation of our healths, it is fit that wee should vse such Meates whose operation are of a hot and drie qualitie, expelling the cold & vnwholsome ayre with good Fires, warme Bathes, comfortable Drinkes, and strong Wines: Being carefull to keepe thy Head and Feet from cold and wet: But yet can the body digest more grosse and strong Meates then in Summer, by reason that the naturall heate is driuen (by the coldnesse of the ayre) into the inward parts of the body, to comfort the vitall Spirits, and to helpe digestion.

The ordinary Sicknesses of this Quarter, are these (or such like) as Rhewmes, Coughes, Poles, Palsies, Gowtes, Sore Eyes, Cathars, Crampes, Tooth-ach, Sciaticaes, Flixes, &c.

Of the Second part of the Yeare called the Spring.

The Spring compared is to Infancy,
To spring and grow in Vertue till we dye.

Sol in Aries, Taurus, Gemini.

VEr, or the Spring (being the most comfortable Quarter of all the yeare) at that time when the glorious and resplendant Sunne entreth into the first degree of the first Equinoctiall Signe Aries, which is vpon Saturday being the xi. of March, and continueth till Monday the xii. of June, in which space of time the Sunne maketh his reuolution through these three Signes, Aries, Taurus, Gemini.

This Quarter of its proper nature is hot and moyst, participating of the Sanguine Complexion: which humour hath most predomination from nine a Clocke at night, till three of the Clocke in the morning. Now are the dayes and nights of an equall length, and the cheerefull Sunne seemes to smile vpon the face of the new recouered Earth, causing it to produce all kinde of varieties to our Senses. This of all the other Quarters of the yeare, is the most pleasant and wholesome

some, it being the most conuenient time to remoone Diseases of a long continuance, and to preuent those which are like to ensue. Now doe the Birds of the ayre couple and breed, Beasts of the Earth increase, and the Fishes of the Waters doe multiply in abundance, forsaking the deepe to liue in more shallowe places: And now the Earth bringeth foorth all sorts of Flowers, Hearbes, Fruites and Plants, for the needfull vse of Man and Beast. The Spring ouer-wet increaseth Weedes, causing Fruits to be scarce and rotten: It is fitting (for the preseruation of our healths) that we now vse such Meates as are of a colde and drie qualitie; and let your Drinkes be more coole & small then in Winter: And now (if need require) is the best time to Purge, Bathe, Bleede, and Sweat.

The vsuall Infirmities of this Quarter, are Smal-pocks Measels, Scabbes, Pushes in the face, Kings euill, Agues, Feuers, &c.

Of the third part of the Yeare, called Summer.

Like Man in his chiefe state and lusty yeares,
The ripening Summer Quarter best appeares.

Sol in Cancer, Leo, Virgo.

Æstas, or the Summer Quarter begimeth at that time when the scorching Sun entereth into the first degree of the Northern Tropique of Cancer, which is vpon Monday the 21 of June, and doeth continue till Wednesday the 23. of September, in which space of time he passeth through these three Solsticiall Signes, Cancer, Leo, Virgo.

The vsuall condition of this Quarter is to be hot and drie, participating of the Cholericke Complexion, which humour doeth chiefely gouerne from 3. of the Clock in the morning, till 9. before noone. Now is the Sunne at the highest, causing the dayes to be at the longest, and nights shortest. Heate is at the highest, floods at the lowest, Seas most quiet, and the Winds most calme: And now is the fruitfull Earth cloathed in her richest embroydery, imparting of her store vnto all sensible Crea-

and Trees in a cold Climate: A moyst and warme Winter is an enemy to Nature, but a friend to Husbandry; and indifferent store of Snow doeth ranken the Earth, and preserueth Corne. Now for the preseruation of our healths, it is fit that wee should vse such Meates whose operation are of a hot and drie qualitie, expelling the cold & vnwholsome ayre with good Fires, warme Roathes, comfortable Drinkes, and strong Wines: Being carefull to keepe thy Head and Feet from cold and wet: But yet can the body digest more grosse and strong Meates then in Summer, by reason that the naturall heate is driuen (by the coldnesse of the ayre) into the inward parts of the body, to comfort the vitall Spirits, and to helpe digestion.

The ordinary Sicknesses of this Quarter, are these (or such like) as Rhewmes, Coughes, Poles, Palsies, Gowtes, Sore Eyes, Cathars, Crampes, Tooth-ach, Sciaticaes, Fluxes, &c.

Of the Second part of the Yeare called the Spring.

The Spring compared is to Infancy,
To spring and grow in Vertue till we dye.

Sol in Aries, Taurus, Gemini.

VEr, or the Spring (being the most comfortable Quarter of all the yeare) at what time when the glorious and resplendant Sunne entreth into the first degree of the first Equinoctiall Signe Aries, which is vpon Saturday being the xi. of March, and continueth till Monday the xii. of June, in which space of time the Sunne maketh his reuolution through these three Signes, Aries, Taurus, Gemini.

This Quarter of its proper nature is hot and moyst, participating of the Sanguine Complexion: which humour hath most predomination from nine a Clocke at night, till three of the Clocke in the morning. Now are the dayes and nights of an equall length, and the cheerefull Sunne seemes to smile vpon the face of the new recouered Earth, causing it to produce all kinde of varieties to our Senses. This of all the other Quarters of the yeare, is the most pleasant and wholesome

some, it being the most conuenient time to remoone Diseases of a long continuance, and to preuent those which are like to ensue. Now doe the Birds of the ayre couple and breed, Beasts of the Earth increase, and the Fishes of the Waters doe multiply in abundance, forsaking the deepe to liue in more shallowe places: And now the Earth bringeth foorth all sorts of Flowers, Hearbes, Fruites and Plants, for the needfull vse of Man and Beast. The Spring ouer-wet increaseth Weedes, causing Fruits to be scarce and rotten: It is fitting (for the preseruation of our healths) that we now vse such Meates as are of a colde and drie qualitie; and let your Drinkes be more coole & small then in Winter: And now (if need require) is the best time to Purge, Bathe, Bleede, and Sweat.

The vsuall Infirmities of this Quarter, are Smal-pocks Measels, Scabbes, Pushes in the face, Kings euill, Agues, Feuers, &c.

Of the third part of the Yeare, called Summer.

Like Man in his chiefe state and lusty yeares,
The ripening Summer Quarter best appeares.

Sol in Cancer, Leo, Virgo.

ÆStas, or the Summer Quarter begimneth at that time when the scorching Sun entereth into the first degree of the Northren Tropique of Cancer, which is vpon Monday the xii of June, and doeth continue till Wednesday the xiii. of September, in which space of time he passeth through these three Solsticiall Signes, Cancer, Leo, Virgo.

The vsuall condition of this Quarter is to be hot and dry, participating of the Cholericke Complexion, which humour doeth chiefely gouerne from 3. of the Clock in the morning, till 9. before noone. Now is the Sunne at the highest, causing the dayes to be at the longest, and nights shortest. Heate is at the highest, floods at the lowest, Seas most quiet, and the Winds most calme: And now is the fruitfull Earth cloathed in her richest embroydery, imparting of her store to all sensible Crea-

tures for their vse and comfort: Flowers are in their beautie, and Fruit in their delicacie; and the painefull Bees gather their Honey for their future sustenance: Now naturall heate is dispersed abroad vnto the outward parts of the Body, & Man is not so hot within as in Winter, neither can hee digest such grosse and strong Meates, as then; yet the most small and coole Drinkes are most conuenient for our healths, and little store of Meates doeth best suffice Nature, and those which bee boyled are most wholesome, and vse such things as are of a cold and moyst qualitie: An ouer-wett Summer rotteth Fruite, and destroyeth Corne.

The Sicknesses and Diseases of this Quarter, are Feuers, Pestilence, Iaundies, Agues, paine in the Head and Belly, &c.

Of the fourth part of the Yeere, called Autumne or Harueſt.

As Autumne ſtealeth the ſappe from Tree and Flower,
So Death comes creeping neerer euery houre.

Sol in Libra, Scorpio, Sagitarij.

AVtumne, or Harbest (vsually called the Fall of the Leafe) doeth begin when the Sun entereth into the first degree of Libra, which is vpon Wednesday the xiii. of September, where hee maketh the second Equinoctiall, and continueth vntill Tewesday being the xii. of December: in which time hee maketh his passage through these three Signes, Libra, Scorpio, Sagitarij.

The vsuall qualitie of this Quarter is to bee cold and dry, taking the greatest part of the Melancholy Complexion, which Humor doth chiefely reigne from ix. of the Clocke in the Morning, till 3. in the afternoone. The dayes are now againe equally ballanced with the nights; the Grasse is mowed, Corne reaped, Fruites gathered, and the painefull Husband-man reapeth the profit of his forepassed labours: Now doeth the Earth loose the beautie of her former glorie, Flowers fade, Leaues doe fall, Floods increase, and all Creatures loose their former strength & vigour, and the most part of sensible Creatures seeke

for

for shelter against the stormie ensuing Winter: Of all the other Quarters of the yeare this is the most vnwholsome, breeding diseases of diuers kinds in our bodies; therefore beware of the morning and euening cold, & vse such things as are of a hot and moist quality: It is now a time (if need require) to Purge, Bath, and Bleed: Autumne being ouerwet putrifieth Grapes, making bad Wines, and scarcity of Fruit.

The diseases and sicknesses of this Quarter are many, as these or the like; the Stone, paine in the Backe and Kidnies, sore Eyes, Melancholy, Falling-sickenesse, Agues, Fluxes of Blood, Fistulaes, Emrods, Spleene, &c.

Of the meeting of the Planets with the Moone in each Moneth for this yeare, whereby you may learne to know them *and their motion from the fixed Starres:*

Also the disposition of the weather for every Quarter of the Moone *for this Yeare*, 1637.

December.

The 1. day Iupiter
The 4. day Mercuri
The 8. day Saturne } is neere the Moone.
The 9. day Venus
The 28. day Iupiter
The 29. day Mars

New Moone on Wednesday the vi. day, a quarter past ten of the clocke in the morning, frost.

First

First Quarter on Thursday the xiiii. day, at iii. of the clocke in the afternoone, Wett.

Full Moone on Thursday the xxi. day iii. quarters of an houre past xii. of the clocke at noone, Tempestious.

Last Quarter on Thursday the xxviii. day, at vi. of the clocke in the morning, Wett.

Of three Eclipses this yeere.

There will be three Eclipses this yeare, whereof two of the Sun and the third of the Moone; The two Eclipses of the Sun happeneth when it is night to vs: And the Eclipse of the Moone chanceth in our day, and therefore they cannot bee seene in our Horizon, or by vs heere in England.

Of the seuerall Conquests of ENGLAND.

Of Ilands *England* was the greatest Ile,
by *Iulius Cæsar* first of Romans knowne;
By Frenchmen next it was possest a while,
by *Claudius Cæsar* they were overthrowne,
To whom, though they allegeance due did yeeld,
yet still their Lawes and Customes they retain'd,
Though they by Strangers then were foild in Field,
to beare a Strangers yoake yet they disdain'd.
Amongst all Nations *England* was the first,
that entertaind the Gospell of the Lord,
Till *Diocleſian* for blood did thirst,
on all that to this Doctrine did accord.
This land by *French-men* and by *Scots* oppreſt,
the *Saxons* ayded it, and it enioy'd,
Till *Danes* did vanquish them, and it possest,
who by the former People were destroy'd:
And ever since, the Noble *Normans* race
fiue hundred sixtie nine yeares here remain'd,
No Forreigne powers their Kingdome could deface,
such stout victorious Kings of them haue raign'd.
Heavens keepe our royall King, our Queene, and Prince,
Bleſſe Word and Sword our Foes for to convince.

The

The beginning, continuance, and ending of the Kings reignes since the Conqueſt with the time how long it is ſince, to this Yeare 1637.

K. Charles. 1625. Mar. 27. After which, writing 13. yeares.

The explanation of the former Table.

NOte that euery King began his raigne, the same time that the next precedent King ended his.

If you desire to know how long it is since the beginning of the raigne of any King, looke how long it is since the ending of the precedent King, and there you shall finde your request.

As for example: If you would know when King Henry the 8 began his raigne, how long he raigned, and also how long it is since his raigne: find out first his name amongst the names of the Kings, and searching the row towards the right hand, you shall finde he began his raigne in the yeare 1509 the 22 of Aprill, and vnder the title of the time that he raigned, is 37 yeares, 10 months, and 2 days: And looking forward in the same rowe, where is 127 yeares Aprill 22 vnder the title of since their raigne, and so long it is since he dyed.

How to iudge what Weather will follow, by the rising and setting of the Sunne.

THe Sunne rising bright and cleare, signifieth a pleasant day: If he rise fiery red, it promiseth raine: If in his rising hee bee thinly ouercast with a cloud, it betokeneth foule weather: If the Sun driue the clouds before him into the West, it signifieth faire weather: If at his rising there appeare a circle about him, & vanisheth away equally, it betokeneth fair weather. Also, if he setteth red, it signifieth faire weather: If at his setting he be of diuers colours, or clouds like water, it threatneth raine. If at the rising of the Sun, his beames seeme red, or long, or incompassed with red clouds, it signifieth great windes: If at his setting there appeare a thicke myst, or if it raineth in the euening, it threatneth very foule weather to follow. Also, if the Sunne beames be spotted eyther greene, pale, or blacke, gathered to a cloud, it signifieth raine. The Sun setting cleare without any cloud, signifieth a faire night to ensue. If the circle, or circles about the Sun be cleare, & of no continuance, looke for faire weather: If there be many circles, it signifieth windes: the redder they are, the more vehement winds. If the circles are heere and there broken, and are thicke and blacke, looke for cold wind or snow: Or, if he settle behinde a great black cloud, raine followeth.

How

How weather is foreknowne by the Moone.

IF the Moone in the third day of her change, or three daies before her full, or in the midst of the quarter, be found of pure light, nothing encompassing her, the ends direct vp, shee promiseth fayre weather: but bent to red colour, prouoketh winds. The Moon pale, or somwhat blacke or thicke, threatneth raine. When the Moone is fiue dayes olde, marke the tips of her hornes, if they be blunt, it signifieth raine: if sharpe pointed and pricking outwards, great winds. If in the fourth day after her change, she haue a red circle about her, it signifieth winds and raine.

Of the iudgement of the weather by the Starrs.

IF the Starres appeare of much light, and seeme to be of more bignesse & blazing then ordinary, it betokeneth great windes & moysture in that part where they seeme so: and in Winter, great frostes. When diuers Starres appeare with long fiery tayles, it threatneth winds, and great drought: the more in number, the greater will be the effect. Also, when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in diuers places, it signifieth diuers winds: If in all places, winds, thunder, lightning, and most tempestuous weather.

A short Instruction, and very necessarie to know *the times and seasons when to Sow, and replant* all maner of Seedes for the Garden.

SOw Cabbages in Februarie, March, or Aprill, in the Wane of the Moone: and replant them in the Decrease.

Sow Cabbage-Lettuse in Februarie, March, or July, in the old of the Moone.

Sow Onions & Leekes, in February or March, at the Wane of the Moone.

Sow Beetes in Februarie or March, at a full Moone.

Sow

Sow Colewoits white & greene, in the middle of August or September: Plant the young ones in October, and sett them againe in November.

Sow Parsneys in Februarie, Aprill, or June, in a fayre day:

Sow Radish in Februarie, Aprill, or June, in the increase of the Moone.

Sow Pumpions, Cowcumbers, Mellons, and Gourdes, in Februarie, March, or June, in a hotte and fayre day.

Sow Spinage in Februarie or March, in the old of the Moone

Sow Parsley, Fennell, and Annis-seede, in Februarie or March at the full of the Moone.

Sow white Cicory in Februarie, March, July, or August, in a full Moone.

Sow Cardus-benedictus in Februarie, March, or May, when the Moone is old.

Sow Basill in March, in an old Moone.

Sow Purslaine in Februarie, or March, in ỹ increase of ỹ moone.

Sow Margerain, Violets, Time, Flower-gentle, Rosemary, & Lauender, in Februarie, March, or Aprill, at the increase of the Moone.

Sow Garden-cresses, and Rocket, in Februarie, at the increase.

Sow Sauill in Februarie or March, at a new Moone.

Sow Coriander, and Borage, in Februarie or March, at the Moones increase.

Sowe Harts-horne, and Samphire, in Februarie, March, or Aprill, at an old Moone.

Sow Gilliflowers, Hearts-ease, and Wall-flowers, in March or Aprill, in an old Moone.

Sow Cardus, and Artichokes, in March or Aprill, when the Moone is old

Sow Chick weed, in Februarie or March, at the full of the Moone.

Sow Burnet in Februarie or March, at an old Moone.

Sow Hisop and Sauery in March, when the Moone is old.

Sow double Marigolds in Februarie or March, at the increase of the Moone.

Sow Larkes-foote, Sparges, and Sperage, in Februarie, in an old Moone.

Sow

Sow white Poppy, and Palma-Christi in February or March, at the increase of the Moone.

Sow all manner of Corne the Moone increasing, she being in Cancer, Libra, or Aquarius.

Set or sow all kind of Seeds the Moone in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, or Pisces: but those Seedes whose Roates are round, should be sowne three or fower dayes before, or after the full Moone.

Certaine and short Rules, for the comforting of the chiefe officiall Members of the Body of Man.

Things which are good to comfort the Head.

Lignum-Aloes, Mariorum, Galingale, Muske, Rosemary, Roses, Cammomell, Rue, Frankincence, Nutmegs, Hysop, Balme, Mints, Spike, and Gladen.

Things good for the Eyes.

Fennell, Verven, Cloues, Cold water, Celendine, Eybright, Roses, and Agrimony.

Things good for the Stomacke.

Nutmegs, Cloues, Dyganum, Corall, Saffron, Quinces, Wormewood, Olibanum, Agrimony, Fumetory, Mastick, Lignum-Aloes, Spodium, and Coriander prepared.

Thinges good for the Heart.

Saffron, Cloues, Sinamon, Mace, Nutmegs, Mariorum, Burrage, Buglosse, Rosemary, Pirabolanes, Pearles, Lignum-Aloes, Coral, Muske, and Setwell.

Things good for the Liuer.

Liuerwort, great Raysons, Wormewood, Agrimony, Saffron, Cloues, Endiue, Violets, Fennell, Plantine, Dragons, Rosewater, Lettuce, Violets, Sanders.

Things good for the Lungs.

Licorice, Raisons, Almonds, Dates, Liuerwort, Maydenhaire, Elicampane, Pillaces, and Penecles.

Things hurtfull for the Body.

Meates hurtfull to the Teeth.

NUttes, Meates very hot, Warme drinke, Sweete meates and drinkes, Radish rootes, Hard meates, Bitter meates, Milke, much Vomiting, Leekes, Fatte of Fish, Colworts, & Limmons.

Things hurtfull to the Eyes.

Garlicke, Onions, Radish, Drunkennesse, Letcherie, sweete and thicke Wines, Salt meates, Coleworts, all Pulse, Must, Wine, Dust, Smoake, Fire, and reading presently after supper.

Rules of Mensuration.

A Fingers bredth is foure Barly cornes in thicknes; and an Inch three Barly cornes in length: A hands bredth foure fingers: A span is three hands bredth: A foot is foure hands bredth: A Geometriall Pase is fiue foot: an English Pearch is xvi. foot $\frac{1}{2}$. A Furlong is a hundred & twenty fiue pases, or six hundred twenty and fiue foot: An English Furlong is sixe hundred and threescore foot, or a hundred thirtie two paces: A League is a thousand and fiue hundred pases: An Italian Mile is a thousand pases, or eight Furlongs: A common German Mile is thirty two Furlongs. An English Mile is eight Furlongs: An Acre is fortie Pearches in length, and foure in bredth.

A short Instruction for the Table following.

NOte that the first Columne or Row, conteineth the Names & number of Shires, the second of Cities, the third of Bishoprickes; the fourth of Castles, &c. Now goe straight in a line, and you shall easily finde the number Alphabetically, aswell for the English as for the Welsh shires: As for example, Buckinghamshire hath no Citie, no Bishopricke, 11. Market Townes, no Castles, 185. Parishes, &c.

A Catalogue of all the Shires, Cities, Bishoprickes, Market-Townes, Castles, Parishes, Riuers, Bridges, Chases, Forrests, and Parkes, conteyned in euery particular Shire in the Kingdome of England.

15	12	0	15

The Moones night shining.

The Moones morning shining.

The vse of this Table.

SEeke the age of the Moone in the Almanack, then looke the Name in this Table, which you shall find either in the increasing or decreasing, and then in the middle Columne you shall without further labour find the time of her shining.

As for Example: Upon the 20 day of January, I would know how many Howers and Minutes the Moone shineth: I find in the Almanack it is New moone the 16 day; then reckoning from the 16 day, I find she is 5 daies old: Then entring this Table, it sheweth, she shineth 4 howers and 0 minutes: So doth she likewise when she is 25 daies old, &c.

Times of Mariage prohibited by our Church, unleſſe they haue a Licenſe.

From after Aduent Sunday (the 27. of November 1636) till 8 dayes after Twelfe day, being the 14. of January.

From after Septuageſima Sunday (being the 12. of February) till the 16. day of Aprill.

From Monday before Aſcenſion day (being the of 15 May) till Trinitie Sunday being the 4. of June.

The explanation of a new and eaſie Kalender here following, for this preſent Yeare, 1637.

NOte that euery Moneth conteyneth three rowes or Columnes, (the Figures for the number of Dayes excepted) the firſt Columne towards the left hand conteineth the Weeke Daies and Sunday Letter. The ſecond, the Signe wherin the Moone is euery day. And the third, the Changes and Quarters of the Moone. Note that the being thus ○ figured doth ſignifie the new Moone: and placed this) way is the firſt Quarter: Thus ● the Full Moone; And againe this (the laſt Quarter. Note alſo, that the Figures ouer the head of the Moones, doe ſignifie the houre of her Changes; and the Letters vnderneath, the time after noone, or after midnight, N. ſtanding for after noone till Midnight, and M. for after Midnight till Noone.

As for example, Againſt the 8. day of January, being Sunday, I doe finde the Moon in ♏ Scorpio, & is thus (charactered, which is the laſt Quarter, at 1. of the clock in the morning.

Againe, on the 14. of February being Tueſday, I doe finde the Moone in ♓ Piſces, and is thus ○ charactred, which is the New Moone at 10. of the clocke at night, &c.

Note alſo, that at the head of euery Moneth is placed the riſing and ſetting of the Sunne for the middle of euery Moneth: As for example, for the midſt of January the ☉. Sun riſeth at 7 of the clocke, and 43 minutes; and ſetteth at 4 of the clocke and 17 minutes, &c.

It alſo conteyneth (on the back ſide of the leafe) for euery Moneth, the Holy-dayes, and Feaſts, both Moueable and Immoueable; with the beginning and ending of euery Terme: As Twelfeday is on the 6 of January, Eaſter day on the 9. of Aprill, Whitſunday is on the 28 of May: Terme begins on the 23 of January, and endeth on the 13 of February, &c.

A briefe and easie Kalender for this Yeere 1637. which being cut out, is fit to be placed into any Booke of Accompts, Table-booke, or other, conteyning the whole Almanacke, in a short method; By *John White*.
